

Behavioral Health System (AMH)

CDMIS-BHS Problem Code Crosswalk

**Version 3.0
June 2003**

**Information Technology Support Center
Division of Information Resources
Albuquerque, New Mexico**

Introduction

The Chemical Dependency Management Information System (CDMIS) and the Behavioral Health System (BHS), formerly known as MH/SS 2.0, each have independent problem code lists. In an effort to assist in the transition from CDMIS to BHS V3.0, a problem code crosswalk between these two applications has been developed.

Many of the problem codes in the two applications are exactly the same. However, there are several data entry options when the codes are not the same. For instance, the BHS application allows for a more precise problem code, i.e. “Alcohol Abuse, In Remission” or “Cannabis Dependence, In Remission” instead of using the broader code of “Sobriety Maintenance” in CDMIS to document sobriety or remission. The user may now choose a “Remission” code specific to the type of substance.

Another option is for the user to enter a “Provider Narrative” rather than the “Standard Narrative” that is included with the problem or diagnosis code. An example of this would be to use the provider narrative “Homeless” (CDMIS code 53) instead of the standard narrative “Housing” that accompanies the BHS problem code of 80.

There may be an instance when the user wants to capture the information that was previously captured via a CDMIS code and there is not a matching BHS code that if used alone would be satisfactory. In this instance, the user can use a “Visit Flag” or a “Patient Flag” in addition to the BHS code to capture this information. An example would be the CDMIS code of 50 “Single Parent”. The matching BHS code is 62 “Other Family Life Problems”. However, the user may want to use a patient flag, “1”, and assign the narrative of “Single Parent” to patient flag 1 (this is a site specific field) to specifically identify the patient as a single parent.

This crosswalk has been validated by members of the BH MIS workgroup. It includes the entire CDMIS problem code list, however, it is not a comprehensive list of the BHS problem codes. For a complete listing of the CDMIS problem codes and BHS problem codes, please refer to the respective user manuals. For a complete discussion of the visit and patient flag fields, please refer to the BHS V3.0 user manual.
